

Product Requirements Document

Rental Packages

Product Area	Rentals / Self Service	Status	Draft
Initiative Owner	TBD	Date	January 2026
Target UI	EZUI	Discovery Depth	Strategic Initiative
Priority	High	Integrations	Rental Rates (Feature #54004)

1. Executive Summary

EZFacility customers who offer rental-based services (courts, fields, rooms) have no way to sell pre-purchased rental bundles, unlike session-based businesses that use Package Plans. This forces rental-focused facilities into confusing workarounds that ultimately drive customer churn.

Rental Packages will allow facilities to sell hours or occurrences upfront, with automatic deduction when clients book rentals — mirroring the Package Plans experience but purpose-built for rentals. This capability is a strategic precursor to sports vertical expansion, particularly pickleball facilities.

2. Problem Statement

EZFacility has a "Package Plans" feature for sessions (classes and appointments) where customers can pre-purchase bundles and have usage automatically deducted. This capability does not exist for rentals.

Facilities that want to offer rental bundles today must use Package Plans as a workaround. This requires:

- Pre-scheduling availability using reservation types for sessions
- Prevents clients from booking rentals online via Self Service
- Prevents using the built-in rental feature with its rate rules and resource management
- Creates confusion about whether clients are booking a "rental" or a "session"

Who experiences this pain:

User Type	Pain Point
Clients / Members	Cannot book rentals quickly and seamlessly; confusion between rental and session booking
Staff	No way to track rental usage against purchased packages; manual workarounds required

Facility Admins	Cannot offer competitive rental bundle pricing without complex configuration
-----------------	--

Business Impact: Customer churn. EZFacility can often sell around this limitation during initial deals, but retaining customers becomes challenging once they realize the workarounds required.

Why Now: This initiative is a strategic precursor to sports vertical expansion, particularly targeting the growing pickleball facility market where pre-purchased court time packages are a standard offering.

3. Goals

Goals

- Enable facilities to sell pre-purchased rental packages (hours or occurrences) to clients.
- Provide automatic deduction of package balance at booking time, eliminating manual tracking.
- Reduce customer churn driven by missing rental bundle capability.
- Establish a scalable rental package foundation to support future sports vertical expansion (pickleball, courts, fields).

4. Scope

In Scope (MVP)

- Rental Package Configuration (EZUI Admin)
 - Create, edit, and archive Rental Packages
 - Purchase model: hours OR occurrences (one per package, not both)
 - Billing model: flat price OR per-unit pricing
 - Member vs. non-member pricing support
 - Standalone Angular admin page (not unified with Package Plans)
- Rental Package Sales (EZUI Sales)
 - Sell packages to Clients/Members
 - View client package balance on profile
 - Payment processing integration (existing EZUI payment integration)
- Rental Package Deduction (EZUI Schedule)
 - Automatic deduction at booking time (not after rental completion)
 - Hours packages: deduct based on rental duration
 - Occurrences packages: deduct 1 per booking regardless of duration
 - Insufficient balance handling: block booking and offer alternatives
 - Balance restoration when a rental is deleted
- Basic Reporting (MVP)
 - Client remaining balance (visible to staff and clients)
 - Package sales summary (revenue tracking)

Out of Scope (MVP)

Exclusion	Rationale	Future Consideration
-----------	-----------	----------------------

Self Service: Book rentals using Rental Packages	Dependency on New Rental Rates + Self Service integration (Path A)	Phase 2 after dependency resolved
Membership inclusion (packages as membership benefit)	Adds complexity; validate core capability first	Post-MVP enhancement
Membership booking limits (e.g., "12 rentals per month")	Related to membership inclusion; requires limits per membership type per time period	Post-MVP with membership inclusion
MiGym integration	Mobile app out of initial scope	Future roadmap
POS integration	Point of sale out of initial scope	Future roadmap
Classic TMS support	Legacy UI not receiving new features	No plans
Unified Package admin (Rental + Session)	Risk of user confusion; defer consolidation decision	Future architectural decision
Advanced reporting (expiring packages, usage trends)	Not essential for MVP validation	Post-MVP enhancement
Hybrid partial coverage (package + rate for single booking)	Complex implementation; block + alternatives simpler	Post-MVP if requested

5. User Stories

#	As a...	I want to...	So that...	Notes
1	Facility Admin	create and manage Rental Packages	I can offer pre-purchased rental bundles to clients	CRUD + list view, similar to Membership Plans
2	Facility Admin	configure member-specific pricing for Rental Packages	members receive different rates than non-members	Member vs. non-member price points
3	Staff	sell Rental Packages to clients	clients can pre-purchase rental time	Similar to selling Membership Plans
4	Staff	view a client's purchased Rental Packages and balance history	I can see their remaining balance and package history	List view of client's packages
5	Staff (booking)	have the rental automatically deduct from the client's Rental Package	usage is tracked without manual intervention	Auto-deduct at booking time

6	Staff (booking)	see clear options when a client has insufficient package balance	I can complete the booking appropriately	Block + offer alternatives
7	Staff (deleting)	have the package balance restored when a rental is deleted	clients are not penalized	Open decisions on behavior — see Open Questions
8	Facility Admin	view Rental Package sales summary – confirm report name	I can track revenue from this new capability	New vs. update existing TBD
9	Client	view my purchased Rental Packages in Self Service – confirm with Metzger	I know how many hours/occurrences I have remaining	Post-MVP candidate
10	Facility Admin	Have the ability to edit a package	I can make changes as needed	Mimic Package Plans
11	Facility Admin	Have the option to configure a rental package with an expiry date or leave open ended expiration	I can decide whether a package should expire or not	Mimic Package Plans
12	Client	If rental is cancelled before session, automatic refund to package	I am not penalized for a schedule change or cancellation	Mimic Package Plans
13	Facility Admin	Refund a client if they have unused package rentals	I do not penalize the client	Mimic Package Plans
14	Facility Admin	Allow for rental packages to be set to “auto renew” if client desires	I can allow clients to have a seamless experience renewing their package	Mimic Package Plans
15	Client	The ability to share my rental package with associated family members on my account	I can share my rental package with others associated with account	Mimic Package Plans

6. Open Questions

Questions requiring stakeholder answers before or during development:

#	Question	Owner	Status
Q1	Staff permissions: What permission levels are needed for selling Rental Packages vs. configuring them? User noted permissions are "complicated and not intuitive" — needs clarification.	Product / Engineering	Open
Q2	Audit trail: What level of audit logging is required for package purchases, deductions, and restorations?	Engineering	Open
Q3	Package editing: Can an active (sold) package configuration be edited? What happens to existing client balances?	Product / Engineering	Open
Q4	Balance restoration on delete: Should restoration be automatic, or should staff be prompted to confirm? What if the rental has already occurred?	Product	Open
Q5	Reporting approach: Should Rental Package sales data appear in a new dedicated report (Option A), be added to an existing report (Option B), or both (Option C)?	Product	Open
Q6	Different terms for Rental Packages versus Package Plans: "No Show" is universal "Booked" "Check-In" instead of "Attended"	Product	Open

7. Phased Delivery Plan

Phase	Deliverables	Notes
Phase 1 — MVP (EZUI)	Rental Package configuration (CRUD + standalone admin page). Member vs. non-member pricing. Staff sales flow + payment processing. Client profile balance view. Auto-deduction at booking + insufficient balance handling. Balance restoration on rental deletion. Basic reporting (balance + sales summary).	EZUI admin + schedule flows only. Self Service purchasing included as part of MVP (not dependent on Rental Rates).
Phase 2 — Self Service Booking	Enable clients to book rentals using Rental Packages in Self Service, with "use package or pay rate" decision point at booking.	Blocked until New Rental Rates + Self Service integration (separate initiative) is complete.
Future	Membership inclusion (packages as membership benefit). Membership booking limits. Advanced reporting (expiring packages, usage trends). Hybrid partial coverage. MiGym / POS integration.	Post-MVP; scope to be re-evaluated based on market demand.

Self Service Dependency — Sequencing

- 1. Ship Rental Packages for EZUI + Self Service purchasing (this PRD)
- 2. Complete New Rental Rates + Self Service integration (separate initiative)
- 3. Extend Rental Package booking flow to Self Service (Phase 2)

8. Risks

Risks

Risk	Likelihood	Impact	Mitigation
Self Service dependency delays perceived value	Medium	High	Clearly communicate EZUI-first approach; ensure EZUI value is strong standalone

Key Flow: Rental Booking & Package Deduction

High-level overview covering booking, deduction, cancellation, and refund

Appendix: Story Details

Full story writeouts with acceptance criteria and dependencies, for engineering estimation and implementation reference.

Story 1: Admin — Manage Rental Packages

As a **Facility Admin**, I want to **create and manage Rental Packages** so that I can offer pre-purchased rental bundles to clients.

Acceptance Criteria:

- List view displaying all Rental Packages (similar to Membership Plans list)
 - Table with columns: name, status, purchase model, pricing
 - Filter/search capabilities
- Create new Rental Package (button opens side panel, similar to Membership Plans)
 - Package includes: name, description, status (active/inactive)
 - Purchase model: hours OR occurrences (one per package, not both)
 - Pricing model: flat price OR per-unit pricing
 - Examples: "10 hours for \$100 flat" or "10 hours at \$10/hour"
- Edit existing Rental Package (row action opens side panel)
- Archive Rental Package (soft delete, similar to Membership Plans)
- New standalone Angular admin page (not iframed, not combined with Package Plans)

Dependencies: None

Story 2: Admin — Rental Package Member Pricing

As a **Facility Admin**, I want to **configure member-specific pricing for Rental Packages** so that members receive different rates than non-members.

Acceptance Criteria:

- Each package supports two price points: standard (non-member) price AND member price
- Member pricing uses the same pricing model as standard (if standard is flat, member is flat; if standard is per-unit, member is per-unit)
 - Example: "10 hours for \$100 flat (non-member) / \$80 flat (member)"

Dependencies: Story 1

Story 3: Sales — Sell Rental Packages

As a **Staff member**, I want to **sell Rental Packages to clients** so that clients can pre-purchase rental time.

Acceptance Criteria:

- Selling flow similar to selling Membership Plans in EZUI
 - "Sell Rental Package" button available from Rental Packages list and Client Profile
 - Opens side panel for package selection and payment
- Select client and Rental Package to sell
- Payment processing (uses existing EZUI payment integration)
- Upon successful sale:
 - Package added to client profile
 - Balance initialized based on purchased hours/occurrences
- Sold packages visible on Client Profile (similar to how sold Membership Plans appear)

Dependencies: Story 1

Story 4: Client Profile — View Purchased Rental Packages

As a **Staff member**, I want to **view a client's purchased Rental Packages** so that I can see their remaining balance and package history.

Acceptance Criteria:

- Display in Client Profile, similar to existing Packages tab for Package Plans
- List view with columns relevant to Rental Packages:
 - Package name/type
 - Purchased (total hours or occurrences)
 - Used
 - Remaining
 - Status (active/completed)
 - Start/End dates (if applicable)
 - Billed/Paid amounts
- Filter: Active Packages Only / All / Completed
- Row actions: View details, Edit, Delete
- UI Decision (does not significantly affect estimate): Option A — add sub-tabs within existing Packages tab (Sessions | Rentals); Option B — create separate Rental Packages tab in Client Profile

Dependencies: Story 3

Story 5: Schedule — Package Deduction at Booking

As a **Staff member booking a rental**, I want to **have the rental automatically deduct from the client's Rental Package** so that usage is tracked without manual intervention.

Acceptance Criteria:

- Deduction occurs at booking time (not after rental completion)
- Hours packages: deduct based on rental duration
- Occurrence packages: deduct 1 per booking regardless of duration
- Integration with EZUI Schedule
- Client can choose to pay Rental Rate instead of using package

Dependencies: Story 3, Rental Rates (Feature #54004) stable in EZUI

Story 6: Schedule — Insufficient Balance Options

As a **Staff member booking a rental**, I want to **see clear options when a client has insufficient package balance** so that I can complete the booking appropriately.

Acceptance Criteria:

- Block booking with clear message: "You have X hours remaining but this rental requires Y hours"
- Offer alternative 1: Purchase additional hours/occurrences
- Offer alternative 2: Pay the Rental Rate instead (bypass package)
- No hybrid partial-coverage (package + rate for single booking) in MVP

Dependencies: Story 5

Story 7: Schedule — Restore Balance on Rental Deletion

As a **Staff member deleting a rental**, I want to **have the package balance restored** so that clients are not penalized.

Acceptance Criteria:

- When a rental is deleted, restore the deducted hours/occurrences to the client's Rental Package
- Audit trail of restoration (who, when, amount restored)
- Open decisions requiring resolution before implementation:
 - Should balance restoration be automatic on delete, or should staff be prompted to confirm?
 - What if the rental has already occurred (end time has passed) — should balance still be restored?
 - Should invoice adjustments (e.g., refunds via invoice) trigger balance restoration, or only rental deletion?

Dependencies: Story 5

Story 8: Reporting — Rental Package Sales

As a **Facility Admin**, I want to **view Rental Package sales summary** so that I can track revenue from this new capability.

Acceptance Criteria:

- Total packages sold
- Revenue by package type
- Date range filtering
- Open decision — New Report vs. Update Existing (requires clarification before estimation):
 - Option A: Create a dedicated "Rental Package Sales" report
 - Option B: Add Rental Package data to an existing rental or package report
 - Option C: Both — add to existing report AND create a new dedicated report

Dependencies: Story 3

Story 9: Self Service — View Rental Packages

As a **Client**, I want to **view my purchased Rental Packages in Self Service** so that I know how many hours/occurrences I have remaining.

Acceptance Criteria:

- New view in Self Service portal for clients to see their Rental Packages
- Similar to Story 4 (staff view in Client Profile) but client-facing with simplified columns:
 - Package name/type
 - Remaining hours or occurrences
 - Status (active/completed)
 - Expiration date (if applicable)
- Filter: Active / All
- Note: This story may be post-MVP. Final scope decision TBD based on Self Service + Rental Rates dependency (Path A).

Dependencies: Story 4, Self Service + Rental Rates integration

Story 10: Admin — Edit Rental Package

As a **Facility Admin**, I want to **have the ability to edit a package** so that I can make changes as needed.

Acceptance Criteria:

- Edit existing Rental Package from the admin list page (mimic Package Plans edit behaviour)
- Editable fields: name, description, status, pricing, hours/occurrences, expiry configuration, auto-renew setting
- Changes apply to new sales only (existing purchased packages are not retroactively affected)
- Confirmation prompt before saving changes
- Audit trail records who made changes and when

Dependencies: Story 1

Story 11: Admin — Rental Package Expiry Date

As a **Facility Admin**, I want to **configure a rental package with an expiry date or leave it open-ended** so that I can decide whether a package should expire or not.

Acceptance Criteria:

- When creating or editing a package, admin can toggle expiry on or off (mimic Package Plans)
- If expiry is enabled: admin sets a duration (e.g., 30, 60, 90 days) from date of purchase
- If expiry is disabled: package has no end date and remains active until balance is depleted
- Expiry date is displayed on client profile and Self Service package view
- Expired packages are marked inactive and cannot be used for new bookings

Dependencies: Story 1

Story 12: Client — Auto-Refund on Rental Cancellation

As a **Client**, I want to **receive an automatic refund to my package if a rental is cancelled before the session** so that I am not penalized for a schedule change or cancellation.

Acceptance Criteria:

- When a rental is cancelled before the session time, deducted hours/occurrences are automatically returned to the client's Rental Package (mimic Package Plans refund behaviour)
- Applies to cancellations initiated by staff or client (where self-service cancellation is available)
- Refund does not apply after the session start time has passed
- Client receives a notification/confirmation of the refund to their package balance
- Audit trail records the refund event (who cancelled, when, amount restored)

Dependencies: Story 5

Story 13: Admin — Refund Unused Package Rentals

As a **Facility Admin**, I want to **refund a client who has unused package rentals** so that I do not penalize the client.

Acceptance Criteria:

- Admin can manually issue a refund for unused hours/occurrences from the client's Rental Package (mimic Package Plans manual refund)
- Accessible from Client Profile > Rental Packages tab via a "Refund" action
- Admin selects the amount to refund (partial or full remaining balance)
- Refund is processed back to the original payment method or as a credit, per facility settings
- Package is marked as refunded/inactive after a full refund
- Audit trail records the manual refund (admin, amount, date)

Dependencies: Story 3, Story 4

Story 14: Admin — Auto-Renew Rental Package

As a **Facility Admin**, I want to **allow rental packages to be set to auto-renew if the client desires** so that clients can have a seamless experience renewing their package.

Acceptance Criteria:

- When creating or editing a package, admin can enable auto-renew as an option (mimic Package Plans)
- If auto-renew is enabled and client opts in at purchase time, package automatically renews when balance is depleted or expiry is reached
- Auto-renew uses the client's saved payment method on file
- Client is notified before and after auto-renewal occurs
- Client (or staff on behalf of client) can cancel auto-renew at any time from their profile
- Failed auto-renew (e.g., expired card) generates an alert to the client and staff

Dependencies: Story 1, Story 3

Story 15: Client — Family Package Sharing

As a **Client**, I want to **share my rental package with associated family members on my account** so that I can share my rental package with others associated with my account.

Acceptance Criteria:

- Client can designate family members (linked accounts) who are permitted to use their Rental Package (mimic Package Plans family sharing)
- Family sharing is configured from the client's profile or at time of purchase
- When a family member books a rental, their booking can deduct from the primary account's Rental Package
- Admin can view and manage family sharing settings from the client profile
- Shared usage is reflected in the balance/audit trail with the family member's name noted

Dependencies: Story 3, Story 5
